

**Title: SplitsTree: a user report**

**David Nash**

Description/abstract: I report on my experience using the SplitsTree package <http://www.splitstree.org/> to investigate and visualise relations between languages within Australian subgroups (Ngumbin-Yapa and eastern Pilbara). This builds on Bower's (2008) use of SplitsTree to investigate the Karnic subgroup.

Bower, Claire. 2008. Modeling language spread in Australia. /Reconstruction models for Australian languages. Presented to 82nd Annual Meeting of the Linguistic Society of America, Chicago, 6 January 2008. 9pp.
